PROFESSIONAL SUMMARY

Software Engineering · Defensive/Offensive Security · DevOps

Dual-competency Software Engineer and Cybersecurity Specialist with production ownership spanning high-concurrency backend services, solo L1/L2/L3 security operations, and automated cloud infrastructure. At **DoubleLogic**, solely orchestrated the entire security lifecycle across 7+ production Linux servers—conducting continuous alert triage (L1), deep forensic root-cause analysis on active exploit vectors (L2), and offensive red teaming, Cloudflare WAF virtual patching, and AI Red Teaming / LLM prompt injection defense (L3). In parallel, automated encrypted database disaster recovery pipelines (MySQL/MongoDB to Cloudflare R2, RPO < 1h) and GPU scheduling. Experienced in high-throughput Go/Python backend engineering with transactional concurrency controls ('SELECT ... FOR UPDATE'), alongside academic leadership instructing 500+ undergraduate students at Telkom University.

CORE TECHNICAL COMPETENCIES

Full-Stack, Security & Infrastructure Stack

Cybersecurity & SOC:	Solo L1/L2/L3 Operations, Incident Response & Forensic IOC Extraction, REST/GraphQL API Penetration Testing (BOLA/IDOR), AI Red Teaming & LLM Safety (Prompt Injection Probing), Cloudflare WAF Tuning & Virtual Patching, ModSecurity v3 / OWASP CRS, Wazuh SIEM, STRIDE Threat Modeling, OWASP Top 10, Linux Hardening (iptables/UFW/PAM/SSH).
Languages & Backend:	Golang (Gin, Fiber, Mutex Concurrency, pgx), Python (FastAPI, Flask, Asyncio, Scikit-Learn), TypeScript/JavaScript (Node.js, Express, Next.js, React 19), PHP (Laravel 11/12, Filament v3), Java OOP, C++, Dart (Flutter), Bash Scripting.
Infrastructure & DevOps:	Docker & Docker Compose, Linux Administration (Ubuntu/Debian), Cloudflare R2 & Exabytes Encrypted DR (RPO < 1h), Nginx Load Balancing & Hardening, Prometheus & Grafana Telemetry, GPU Auto-Scheduling, CI/CD (GitHub Actions), Microsoft Teams Webhooks.
Databases & Architecture:	PostgreSQL (Pessimistic Locking 'SELECT ... FOR UPDATE', Composite Indexing), Redis 7 (Pub/Sub, Distributed Locking, Key TTL Eviction), MySQL 8, MongoDB, ChromaDB (Vector Store), Clean Architecture, Hexagonal / Ports & Adapters, Microservices, RAG.

PROFESSIONAL WORK EXPERIENCE

Production Infrastructure, Security & Engineering

Cyber Security & Infrastructure Engineer — DoubleLogic **SOLO L1/L2/L3 OPERATOR** **FULL-TIME REMOTE** Post-Promotion – Present
Solely spearheaded defensive and offensive cybersecurity operations across 7+ production Linux servers, safeguarding proprietary AI services, databases, and client web endpoints without secondary staff.

SINGLE-OPERATOR SECURITY LIFECYCLE EXECUTION (SOLO L1 · L2 · L3)		
LEVEL 1 · TRIAGE & TELEMETRY - Real-time alert triage & log ingestion across 7 production host servers. - Monitored UFW/iptables event logs & authentication anomalies. - Automated health probes & incident routing via MS Teams webhooks.	LEVEL 2 · FORENSICS & RESPONSE - Eradicated active RCE backdoor in DrTKola/YEG repo on Server 139. - Led forensic root-cause analysis on PMCare Ameyo attack vector. - Multi-server post-incident malware, rootkit, & PAM integrity audits.	LEVEL 3 · RED TEAM & AI SAFETY - Engineered Cloudflare WAF virtual patching against zero-days. - Simulated lateral movement, privilege escalation, & API BOLA audits. - Conducted AI Red Teaming: prompt injection & jailbreak mitigation.

- Offensive Audits & API Security:** Executed offensive security reviews on REST/GraphQL API endpoints, identifying and patching BOLA/IDOR flaws and broken object-level authorization matrices prior to release.
- Infrastructure Hardening & Tooling:** Audited IAM access, rotated SSH keys, disabled root password auth, enforced strict UFW rules, and built custom Python security automation toolchains for continuous recon and port auditing.

DevOps & Infrastructure Engineer — DoubleLogic **INITIAL TENURE** Remote · Cloud Infrastructure

- Server Fleet Management:** Administered dozens of Ubuntu Linux servers across Production, Staging, and GPU clusters, maintaining 99.9%+ availability.
- Cost Optimization:** Engineered an automated, timezone-aware GPU scheduler script slashing cloud compute overhead during off-peak hours.
- Disaster Recovery Automation:** Built encrypted database backup pipelines (MySQL & MongoDB) replicated to Cloudflare R2 and Exabytes with verified automated restore drills (RPO < 1 hour via SSH tunneling).
- Observability & Middleware:** Deployed centralized Grafana monitoring stacks (CPU, RAM, Disk, Nginx traffic) with Teams alerting; authored Python Flask/Gunicorn webhook services for high-throughput email and attachment ingest.

Software Engineer & Security Researcher — Independent Consultancy (Upwork) **CONTRACT** 2023 – Present

- API Integration & Production Bug Fixing:** Refactored mission-critical WhatsApp integrations using Evolution API on production servers, resolving race conditions, connection timeouts, and memory leaks.
- Transactional Systems & Helpdesk:** Engineered scalable PostgreSQL schemas with transactional locking for booking platforms; deployed and customized UVdesk enterprise helpdesk ticketing with multi-mailbox routing.
- Vulnerability Research:** Identified, documented, and responsibly patched critical vulnerabilities (SQLi, Stored XSS, BOLA/IDOR) on client web architectures.

Computer Science Laboratory & Teaching Assistant — Telkom University **ACADEMIC APPOINTMENT** Sep 2023 – Present · Surabaya, ID

- Technical Instruction:** Mentored 500+ undergraduate engineering students across 8 subjects: Algorithms & Programming (Golang), Machine Learning (Python), Information System Security (Kali Linux), Cloud Computing (Azure), Data Structures (C++), Operating Systems (Linux), OOP (Java), and Computer Networks (Wireshark).
- Lab & Code Governance:** Administered Cyber Security & Cloud Computing lab environments; conducted weekly code reviews on 300+ submissions per semester, enforcing Clean Architecture, SOLID principles, and Big-O efficiency.

KEY ENGINEERING & SECURITY PROJECTS

Production Systems · High-Concurrency · Autonomous AI · AppSec

AURIX v11.5b Engine

Go · Python · Redis 7 · Next.js

Low-Latency Algorithmic Trading & Quant Engine

Distributed quant trading platform decoupled across 8 Docker containers. Features sub-millisecond WebSocket market bus in Go, Layer-4 capital protection with Redis `EXPIREAT` TTL caps (-2.0%), and forward-validated 71.4% win rate across millions of ticks.

SafeTicket & FlashSale

Go · PostgreSQL · K6 · Nginx

High-Concurrency Booking & Transaction Engine

Engineered high-throughput flash-sale backend in Go comparing concurrency mechanisms. Enforced PostgreSQL Pessimistic Locking (`SELECT ... FOR UPDATE`), guaranteeing zero overselling under multi-thousand concurrent virtual user stress tests.

ForgeFlow

Go · Postgres · Redis · Docker

Distributed Workflow Orchestration Platform

Self-hosted distributed task execution engine in Go with PostgreSQL state persistence, Redis Pub/Sub coordination, and graceful worker shutdown. Guaranteed at-least-once task delivery under worker node failures.

NOVA & Poesaka AI Runtime

Go · Python · Hexagonal · Bubble Tea · Ollama

Autonomous Zero-Leak Agent & Security Research OS

Engineered autonomous engineering & security runtime in Go with strict Hexagonal Architecture. Features interactive TUI, deterministic JSON Schema capability routing preventing arbitrary code execution, and SQLite knowledge graph.

Stockbit AppSec Simulation

Go · STRIDE · OWASP Top 10 · Docker

Fintech Secure SDLC & Threat Mitigation Prototype

Full-lifecycle Secure SDLC prototype demonstrating proactive security engineering. Remediated OWASP Top 10 flaws (BOLA/IDOR, SQLi, broken auth) via strict input validation, contextual RBAC, and automated CI/CD security test suites.

Pentara (Pentest Nusantara)

Laravel 11 · PHP 8.2 · Python · MySQL

Multi-Tenant B2B SaaS Bug Bounty Platform

Architected multi-tenant vulnerability disclosure SaaS with granular RBAC (Admin, Enterprise, Researcher), automated CVSS 3.1 scoring engine, encrypted PoC file handling, and executive PDF audit report generation.

ACHERON & Cassandra v2.1

Python · AsyncIO · Playwright · Nuclei

Asynchronous SQLi Framework & Autonomous Recon

Developed high-speed async SQLi assessment framework with polyglot evasion tampering (Cloudflare/AWS WAF bypass) paired with autonomous attack-surface mapping agent featuring intelligent request throttling and proxy rotation.

BelanjaKu

Next.js 15 · Express · PostgreSQL · Zustand

Production Decoupled E-Commerce Ecosystem

Production e-commerce platform with decoupled architecture. Implemented persistent client-server cart sync via Zustand, structured prompt product generation, JWT auth, and automated test suites.

HydraLock PoC

Python · AES-256-GCM · RSA-4096 · EDR

Ransomware Simulation & Defense Validation PoC

Controlled cryptographic simulation tool testing enterprise EDR, File Integrity Monitoring (FIM), and backup recovery objectives (RTO/RPO), featuring sandbox and debugger evasion detection routines.

Veritas (Efficiency Beast)

Python · FastAPI · ChromaDB · RAG

Zero-Hallucination Enterprise RAG Platform

Local-first document Q&A platform with ChromaDB vector store. Features deterministic chunking, mathematical source attribution guardrails eliminating hallucinations, and sub-200ms document retrieval.

EDUCATION

Bachelor of Science in Informatics

Expected 2027

Telkom University · Surabaya, ID

Current Standing: Semester 7 · Cumulative GPA: 3.50 / 4.00

Relevant Coursework: Distributed Systems & Cloud Computing, Computer Networks & Protocols, Database Systems & Modeling, Information Security, Clean OOP, Software Architecture.

CERTIFICATIONS & CREDENTIALS

- Code Generation & Optimization with IBM Granite — IBM (2024)
- Ethical Hacking & Penetration Testing from Scratch — Udemy (2024)
- Mastering Linux & System Hardening — Udemy (2023)
- Backend Development with JavaScript — Dicoding (2023)
- Fundamentals of Artificial Intelligence — Dicoding (2024)
- Android Application Development — Dicoding (2023)

LANGUAGES & OPERATIONAL READINESS

Indonesian: Native / Bilingual Proficiency • **English:** Professional Working Proficiency (Technical Architecture, Security Audits, RFCs, & Global Client Delivery)
Availability: Full-Time / Contract Remote · WFA Ready · Immediate Operational Deployment
